

GEO VIRTUAL SYMPOSIUM 2021

Seasonality of COVID-19

21 June 2021

Benjamin F. Zaitchik

Earth Observations and COVID-19

First off:
Kudos to the EO
community

COVID-19 Dashboard by the Center for Systems Science and Engineering (CSSE) at Johns Hopkins University (JHU)

Last Updated at (M/D/YYYY)

**COVID-19 outbreaks can
happen at any time of year
and in any climate zone.**

And yet:

- There is considerable **prior reason** to expect that an upper respiratory infectious disease like COVID-19 may be seasonal.
- There is **laboratory evidence** of environmental sensitivities consistent with these prior expectations.
- Some epidemiological studies claim to have **isolated a meaningful seasonal pattern in COVID-19 case data.**

This matters because:

- We need to understand the extent to which northern hemisphere summer 2021 declines are due to immunity rates vs. seasonal protection.
- Should COVID-19 persist, we can inform vaccination strategies and Non-Pharmaceutical Interventions based on seasonal patterns.

Understanding seasonality is important

Why expect seasonality?

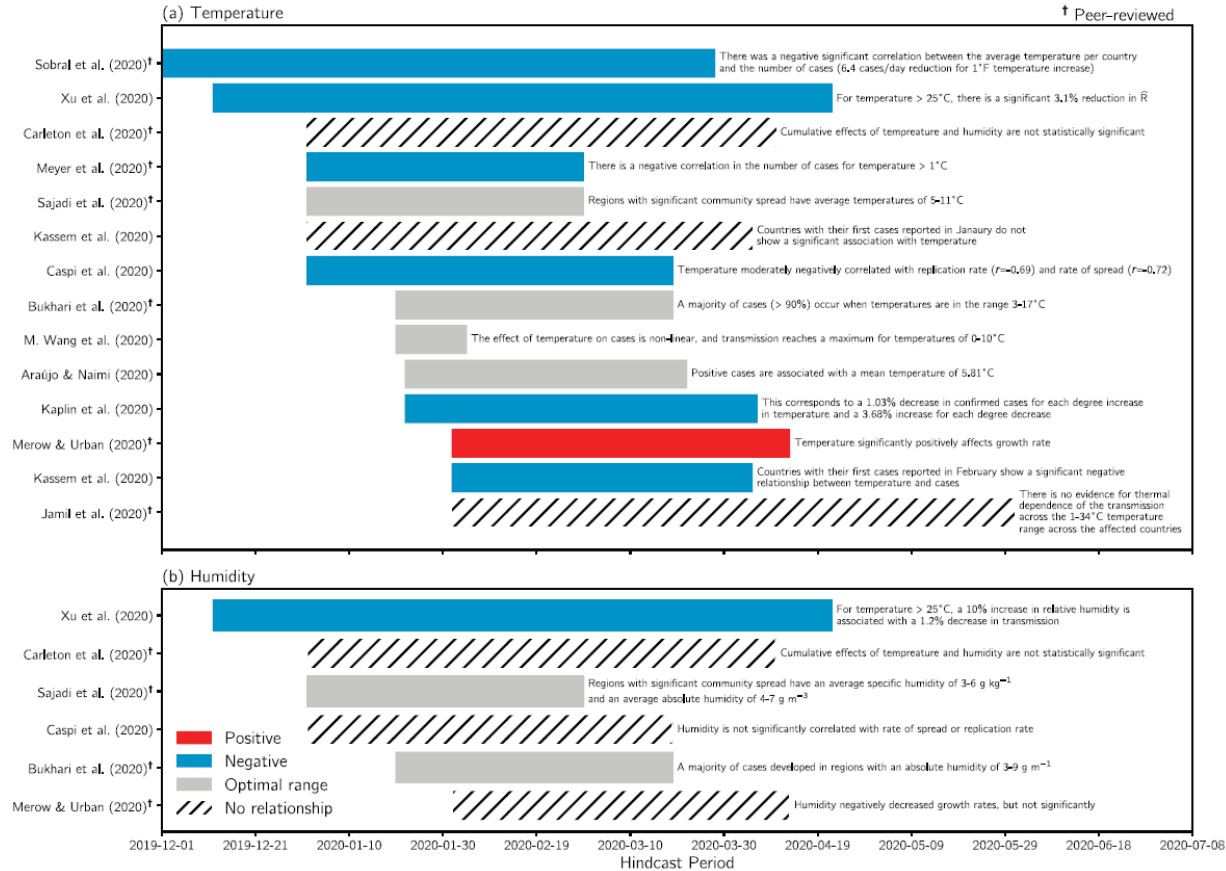

- Virus stability and viability
- Host susceptibility and immune response
- Human Behavior
- Societal patterns

Why expect seasonality?

- **Virus stability and viability** – weather and indoor environment
- **Host susceptibility and immune response** – weather and indoor environment
- **Human Behavior** – weather
- **Societal patterns** – calendar-driven

Seasonality is not synonymous with meteorological sensitivity

Seasonality vs. meteorological sensitivity

Kerr et al. (2021)
<https://doi.org/10.1016/j.onehlt.2021.100225>

Seasonality vs. meteorological sensitivity

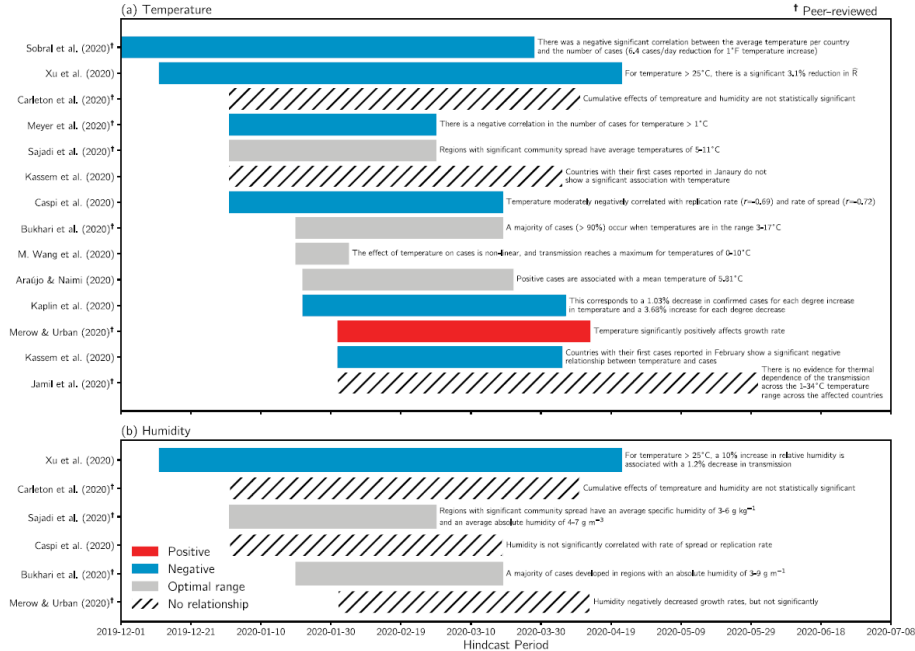

Figure 1: The inferred seasonal R multiplier $\Gamma(t)$ of the combined models estimate, with 50% and 95% confidence intervals. Gray boxes indicate data range of each dataset.

Seasonality vs. meteorological sensitivity

Earth Observations have a critical role to play

The role of Earth Observation

- Work proactively to harmonize EO data with relevant health data and covariates.
 - https://github.com/CSSEGISandData/COVID-19_Unified-Dataset
 - <https://www.medrxiv.org/content/10.1101/2021.05.05.21256712v1>

The role of Earth Observation

- Work proactively to harmonize EO data with relevant health data and covariates.
- Take responsibility to integrate environmental and non-environmental data.

The role of Earth Observa

- Work proactively to harmonize EO data and covariates.
- Take responsibility to integrate environmental data.

First Report of the WMO COVID-19 Task Team

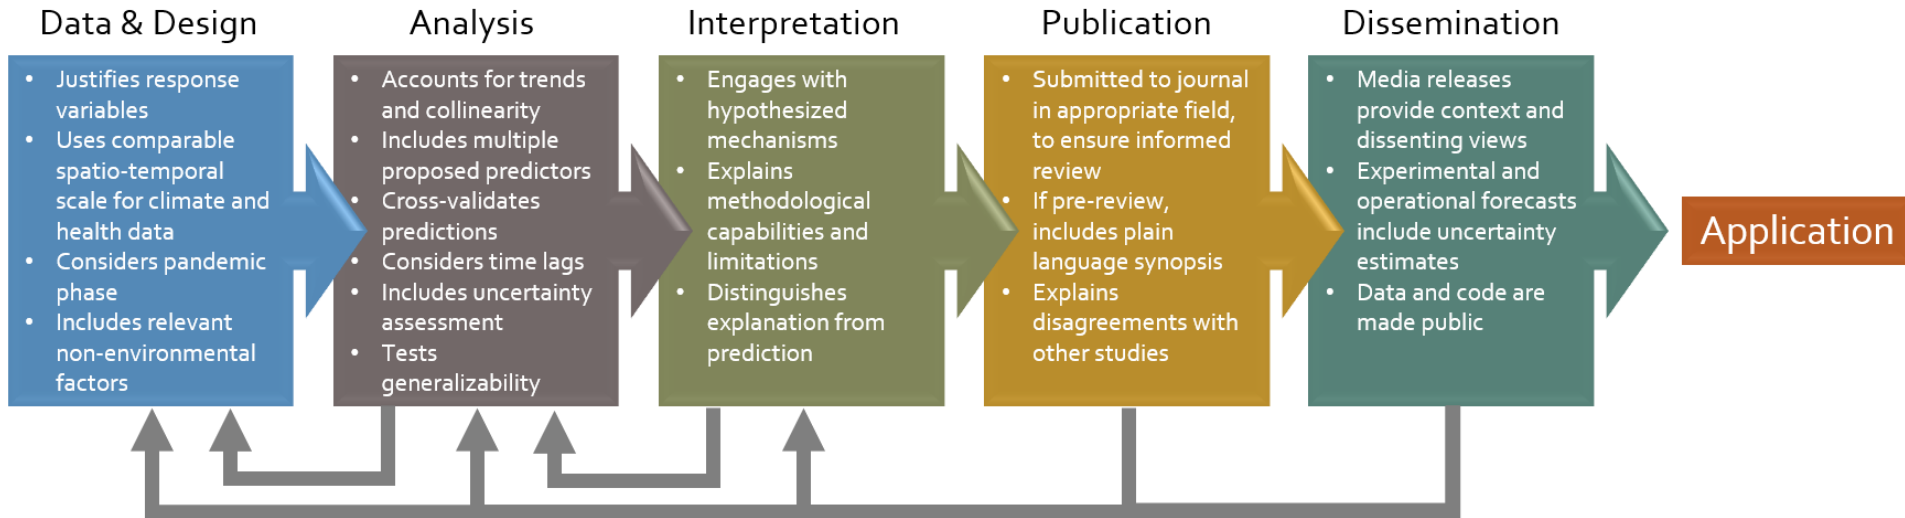

Review on Meteorological and Air Quality Factors Affecting the COVID-19 Pandemic

The role of Earth Observation

- Work proactively to harmonize EO data with relevant health data and covariates.
- Take responsibility to integrate environmental and non-environmental data.
- Communicate findings clearly and cautiously.

The role of Earth Observation

Thank You!
