# Summary of Actions underway in GIS context

- Implement COVID-19 Information Model (prepare GIS data layers)
- Analyze health and demographic data (understand community risk)
- Model the Spread Of Disease (Spatial /Temporal modeling)
- Measure social distancing effectiveness (leveraging mobility data)
- Determine When and Where Hospital System Capacity is Exceeded
  - Forecast Impacts on Hospital Bed, ICU, and Ventilator Capacity
- Perform location analytics to
  - Identify optimal testing and treatment sites
  - Allocate resources (beds, equipment, personnel, ...)
