

# GEO VIRTUAL SYMPOSIUM 2020

Session X: Session Title

## **GEO Health Community Response to the COVID-19 Pandemic**

June 7, 2020

## **Este Geraghty, MD, MS, MPH, CPH, GISP**

**Este** is the Chief Medical Officer at Esri, developer of the world's most powerful mapping and analytics platform. She heads Esri's worldwide health and human services practice and is passionate about transforming health organizations through a geographic approach. Previously, she was the deputy director of the Center for Health Statistics and Informatics at the California Department of Public Health. There she engaged in statewide initiatives in meaningful use, health information exchange, open data and interoperability.

While serving as an associate professor of clinical internal medicine at the University of California (UC), Davis she conducted research on geographic approaches to influencing health policy and advancing community development programs.

Geraghty is a widely published author and has lectured extensively around the world on a broad range of topics that include social determinants of health, open data, climate change, homelessness, access to care, opioid addiction, privacy issues and public health preparedness. She received her medical degree, master's degree in health informatics, and master's degree in public health from UC Davis. She is board certified in public health (CPH) and is also a geographic information system professional (GISP)

### Daily confirmed COVID-19 cases, Jun 7, 2020

The number of confirmed cases is lower than the number of total cases. The main reason for this is limited testing.

## Five steps to understand the potential impact COVID-19 can have on your organization and community

As global communities and businesses seek to respond to the COVID-19 pandemic, you can take these five proactive steps to create an instant picture of your organization's risk areas and response capacity.

**NEW: Coronavirus Response Solution Released**

As global communities and businesses seek to respond to the COVID-19 pandemic, you can take these five proactive steps to create an instant picture of your organization's risk areas and response capacity.

## Step 1

### Map the cases

Map confirmed and active cases, fatalities, and recoveries cases to identify where COVID-19 infections exist and have occurred.

## Step 2

### Map the spread

Time-enabled maps can reveal how infections spread over time and where you may want to target interventions.

## Step 3

### Map vulnerable populations

COVID-19 disproportionately impacts certain demographics such as the elderly and those with underlying health conditions. Mapping social vulnerability, age, and other factors helps you monitor the most at-risk groups and regions.

## Step 4

### Map your capacity

Map facilities, employees or citizens, medical resources, equipment, goods, and services to understand and respond to current and potential impacts of COVID-19.

## Step 5

### Communicate with maps

Use interactive web maps, dashboard apps, and story maps to help rapidly communicate your situation.
